

## DESIGNED FOR YOU

Whether you are a startup or established tracking company, Key Telematics has the perfect software solution for you: your brand, your hardware choice.

**Your Brand** - your clients will see your domain details and your brand appears on the software. Build your own brand and reputation.

**Your Hardware Choice** - flexible choice of device or multiple device types. Multiple platforms including GPRS, Satellite and RF. Combination hardware including temperature tags, driver ID etc.

**Reduced support burden** - simple, intuitive user interface requires minimal support or user training.

**Complete control** - view unit data statistics, user statistics and control over devices and user access.

**API** - build your own features and 3rd party integration.

**Zero time contracts** - complete freedom. We never lock customers into contract periods. Pay only for the data you use.

## OUR CUSTOMERS

Our customers operate in diverse markets such as fleet and logistics, aviation, marine, earth moving, passenger transport, rail, agriculture, emergency services and oil and gas.

Partnering with us as your technology partner gives you access to all our experience, making it effortless to build your business.

## VENDOR FOCUSED SOFTWARE

The Key Telematics software has been developed specifically with you in mind. Whilst all the standard features are available to the end user, it is the administrative tools

that really impress our customers and make supporting their client effortless

## FEATURES AND BENEFITS

### Flexible Reporting Functions

Key Telematics reports are customizable to your needs.

Reports can be generated ad hoc or scheduled. Scheduled reports are automatically emailed to specified recipients.

The platform also offers detailed telemetry reports showing raw device data for easy device diagnostics.

### Flexible event notifications and alarms

Events and notifications can be set up using multiple argument strings, catering for any circumstance. In a control room environment the users need to acknowledge the alert, or alternatively, comment on the alert. This feature comes with a full audit trail. Alerts can either be sent by e-mail or SMS.

### Speed by Road

Speed can either be measured against the actual road speed, or against a user defined maximum speed, or a customised geo-zone speed limit.

In addition to speeding reports, real-time reporting of these events are available.

### Asset States

Asset State, unique to Key Telematics, is a feature that enables the system to automatically assign a given "state" to an asset based on a configurable list of rules. These states are colour coded for ease of use.

### Garmin integration

Garmin tracking devices and driver interface modules are integrated on our software platform allowing you to communicate with your drivers in real time, using SMS/text messages. Another key advantage of using Garmin is route optimisation with traffic updates

### Cloud Based & easy access

Being a cloud based solution provides you with high availability, excellent speed and reliable data security with minimal burden on your IT infrastructure.

The software supports multiple browser options (e.g. Firefox, Safari, IE & Chrome), iPhone and Android access as well as iPad and Tablet access.

### Maintenance Reminders

The following maintenance reminders can be set up:

- Time based reminders (e.g. license expire)
- Odometer based reminders (e.g. service intervals)
- Engine hour reminders

Integrated maintenance software is available as an additional feature.

### Geofences

The software enables to create multi-polygon geofences. These include:

- Keep-in,
- No-Go,
- Locations, and
- Routes.

Assign these to specific assets, as well as user defined speed limits and proximity warnings by geofence.

### Audit trail

The platform tracks all user inputs and changes, providing you with a comprehensive audit trail.

### Feature control

As a vendor, you will be able to set up as many different user roles, users and clients as you require. You can enable and disable user features as required. This minimizes training and support burden.

### International Options

The software is multi lingual, has multiple measurement units (Miles, Km, Knots etc.), and also caters for multiple time zones.
